MANOHARI A

## Roll Number 🥀

KUB23CSE078

## **EXPERIMENT**

## Title

ENCODE THE NUMBER

## **Description**√<sup>0</sup>

You work in the message encoding department of a national security agency. Every message that is sent from or received in your office is encoded. You have an integer N, and each digit of N is squared and the squares are concatenated together to encode the original number. Your task is to find and return an integer value representing the encoded value of the number.

**input1:** An integer value N representing the number to be encoded.

18

## **Output:**

Return an integer value representing the encoded value of the number.

Sample Input:

167

Sample Output:

13649

## Source Code:

```
:018 F181
 n=int(input())
res=0
f=1
 while n>0:
     rem=n%10
     sq=rem**2
     if sq<10:
         res=sq*f+res
         f*=10
     else:
         res+=sq*f
         f*=100
     n//=10
print(res)
```
